

Super Science Special Course

~Earth Science Basic Experiments~

We had a basic earth science experiment called “Atmospheric Oceanography” in the 1st grade’s optional class, on October 16th and 23rd. First, we had an experiment to learn about the atmosphere. We considered how to make clouds in terms of physical changes. We used simple tanks and had model experiments about warm fronts and cold fronts.

Second, we had model experiments about El Nino and La Nina, which are ocean- atmosphere - phenomena.

Students thought about the movements of the atmosphere and ocean qualitatively. We are going to consider and verify science topics through experiments and practice in the future..
